

BC REGION STUDENT COOP PROGRAM

FABRICATOR'S ENGINEERING APPRENTICE PROGRAM

The Canadian Institute of Steel Construction's BC Region Fabricator Engineering Program formally integrates a University of British Columbia (UBC) student's academic studies with work experience in cooperative employer organizations. Thanks to the support of the steel industry, prospective engineering students are offered a chance to work with the various aspects of engineering within a fabrication and consultant setting, before graduation. The engineering coop program integrates a four month work-term within the regular four year engineering program, whereby students split the term working with both a fabricator and structural engineering consultant. This program allows students to obtain knowledge and experience of the industry, which will assist them with planning their future careers. The program also gives employers a chance to recruit students prior to their graduation.

Congratulations to the following students who were selected to participate in the Fabricator's Engineering Apprentice Program over the past year. They were employed with CISC Members during the year, and the companies are included below.

Kelsey Van Steels (M3 Steel (Kamloops) Ltd.)

Sayed Ali Nayeri (Solid Rock Steel Fabricating Co. Ltd. & Canron Western Constructors Ltd.)

Payam Memar (Empire Iron Works Ltd.)

Benny Siu Kwok (Wesbridge Steelworks Limited)
